

Omonefe Oseremen

Junior Cyber Analyst · SOC / IAM analyst / Security Engineering

efeosseremen@gmail.com · [Portfolio](#) · [GitHub](#) · [LinkedIn](#) · Brussels, Belgium

EDUCATION

BSc Cybersecurity — Howest University

Brugge, Belgium · Information & Communication Technologies

Sep 2025 – Present

International Education & Sustainable Development — UC Leuven-Limburg

Leuven, Belgium

Sep 2024 – Aug 2025

CERTIFICATIONS

Ethical Hacker (Cisco, 2025) · Junior Cyber Analyst (Cisco, 2025) · Network & Devices Initial Configuration (Cisco, 2025)

SKILLS

Splunk · SIEM (QRadar, LogRhythm, Wazuh, AlienVault OSSIM) · MITRE ATT&CK · Wireshark · Kali Linux · Python · JavaScript · Threat Detection · Triage · Detection Engineering · Java · Springboot

WORK EXPERIENCE

Web Developer Intern — UZ Leuven

Leuven, Belgium

Mar 2025 – Jun 2025

- Designed a responsive website from scratch (HTML, CSS, JavaScript) for the nurse department to improve onboarding of newly recruited staff.
- Gathered and structured user needs, ensuring content was accurately reflected in the design.
- Documented feedback and challenges and communicated improvement input to the team.

Freelance Web Developer — Self-Employed

Self-employed · Remote

2019 – 2024

- Delivered responsive, business-facing websites for clients over 5 years, using Python, JavaScript, Java, and Spring Boot to build and maintain both front-end interfaces and back-end services.
- Translated client requirements into functional, well-structured web solutions, helping businesses establish and grow their online presence.

PROJECTS

SOC Home Lab

2026

- Designed and deployed a virtualized SOC environment (Windows + Linux endpoints) with centralized log collection to simulate real-world detection and response.
- Instrumented hosts with Sysmon, forwarded telemetry into a SIEM, and built custom detection rules and dashboards; mapped simulated attacks (recon, brute-force, lateral movement) to MITRE ATT&CK.

github.com/Efe3000/SOC-home-lab

Cybersec-Ops Toolkit

2026

- Built Python and Bash utilities to automate repetitive SOC tasks — log parsing, IOC lookups, and indicator enrichment.
- Developed triage tools that summarize alerts and pull host/user context; delivered modular, version-controlled, documented tooling for team adoption.
